

TECHNICAL DATA

MQ-6 GAS SENSOR

FEATURES

- \* High sensitivity to LPG, iso-butane, propane
- \* Small sensitivity to alcohol, smoke.
- \* Fast response .      \* Stable and long life      \* Simple drive circuit

APPLICATION

They are used in gas leakage detecting equipments in family and industry, are suitable for detecting of LPG, iso-butane, propane, LNG, avoid the noise of alcohol and cooking fumes and cigarette smoke.

SPECIFICATIONS

A. Standard work condition

Symbol	Parameter name	Technical condition	Remarks
V <sub>c</sub>	Circuit voltage	5V±0.1	AC OR DC
V <sub>H</sub>	Heating voltage	5V±0.1	AC OR DC
P <sub>L</sub>	Load resistance	20K Ω	
R <sub>H</sub>	Heater resistance	33 Ω ± 5%	Room Tem
P <sub>H</sub>	Heating consumption	less than 750mw	

B. Environment condition

Symbol	Parameter name	Technical condition	Remarks
T <sub>ao</sub>	Using Tem	-10℃-50℃	
T <sub>as</sub>	Storage Tem	-20℃-70℃	
R <sub>H</sub>	Related humidity	less than 95% Rh	
O <sub>2</sub>	Oxygen concentration	21%(standard condition)Oxygen concentration can affect sensitivity	minimum value is over 2%

C. Sensitivity characteristic

Symbol	Parameter name	Technical parameter	Remarks
Rs	Sensing Resistance	10K Ω - 60K Ω (1000ppm LPG )	Detecting concentration scope: 200-10000ppm LPG , iso-butane, propane, LNG
α (1000ppm/ 4000ppm LPG)	Concentration slope rate	≤0.6	
Standard detecting condition	Temp: 20℃ ± 2℃ Humidity: 65%±5%	Vc:5V±0.1 Vh: 5V±0.1	
Preheat time	Over 24 hour		

D. Strucyure and configuration, basic measuring circuit

Structure and configuration of MQ-6 gas sensor is shown as Fig. 1 (Configuration A or B), sensor composed by micro  $\text{Al}_2\text{O}_3$  ceramic tube, Tin Dioxide ( $\text{SnO}_2$ ) sensitive layer, measuring electrode and heater are fixed into a crust made by plastic and stainless steel net. The heater provides necessary work conditions for work of sensitive components. The enveloped MQ-6 have 6 pin ,4 of them are used to fetch signals, and other 2 are used for providing heating current.

Electric parameter measurement circuit is shown as Fig.2

#### E. Sensitivity characteristic curve

Fig.2 sensitivity characteristics of the MQ-6

Fig.3 is shows the typical sensitivity characteristics of the MQ-6 for several gases.

in their: Temp: 20°C、

Humidity: 65%、

O<sub>2</sub> concentration 21%

RL=20k Ω

Ro: sensor resistance at 1000ppm of LPG in the clean air.

Rs: sensor resistance at various concentrations of gases.

Fig.4 is shows the typical dependence of the MQ-6 on temperature and humidity.

Ro: sensor resistance at 1000ppm of LPG in air at 33%RH and 20 degree.

Rs: sensor resistance at 1000ppm of LPG in air at different temperatures and humidities.

### SENSITIVITY ADJUSTMENT

Resistance value of MQ-6 is difference to various kinds and various concentration gases. So, When using this components, sensitivity adjustment is very necessary. we recommend that you calibrate the detector for 1000ppm of LPG concentration in air and use value of Load resistance ( $R_L$ ) about 20K Ω (10K Ω to 47K Ω).

When accurately measuring, the proper alarm point for the gas detector should be determined after considering the temperature and humidity influence.

## MQ-6 Semiconductor Sensor for LPG

Sensitive material of MQ-6 gas sensor is  $\text{SnO}_2$ , which with lower conductivity in clean air. When the target combustible gas exist, The sensor's conductivity is more higher along with the gas concentration rising. Please use simple electrocircuit, Convert change of conductivity to correspond output signal of gas concentration.

MQ-6 gas sensor has high sensitivity to Propane, Butane and LPG, also response to Natural gas. The sensor could be used to detect different combustible gas, especially Methane, it is with low cost and suitable for different application.

### Character

- \* Good sensitivity to Combustible gas in wide range
- \* High sensitivity to Propane, Butane and LPG
- \* Long life and low cost
- \* Simple drive circuit

### Application

- \* Domestic gas leakage detector
- \* Industrial Combustible gas detector
- \* Portable gas detector

### Configuration

### Technical Data

Model No.		MQ-6	
Sensor Type		Semiconductor	
Standard Encapsulation		Bakelite (Black Bakelite)	
Detection Gas		Isobutane, Butane, LPG	
Concentration		300-10000ppm ( Butane, Propane, LPG )	
Circuit	Loop Voltage	$V_c$	$\leq 24V$ DC
	Heater Voltage	$V_H$	$5.0V \pm 0.2V$ AC or DC
	Load Resistance	$R_L$	Adjustable
Character	Heater Resistance	$R_H$	$31\Omega \pm 3\Omega$ (Room Tem.)
	Heater consumption	$P_H$	$\leq 900mW$
	Sensing Resistance	$R_s$	$2K\Omega - 20K\Omega$ (in 2000ppm $C_3H_8$ )
	Sensitivity	$S$	$R_s(\text{in air})/R_s(1000ppm C_4H_{10}) \geq 5$
	Slope	$\alpha$	$\leq 0.6 (R_{2000ppm}/R_{1000ppm} \text{ LPG})$
Condition	Tem. Humidity	$20^\circ C \pm 2^\circ C$ ; $65\% \pm 5\% RH$	
	Standard test circuit	$V_c: 5.0V \pm 0.1V$ ; $V_H: 5.0V \pm 0.1V$	
	Preheat time	Over 48 hours	

### Basic test loop

The above is basic test circuit of the sensor. The sensor need to be put 2 voltage, heater voltage ( $V_H$ ) and test voltage ( $V_C$ ).  $V_H$  used to supply certified working temperature to the sensor, while  $V_C$  used to detect voltage ( $V_{RL}$ ) on load resistance ( $R_L$ ) whom is in series with sensor. The sensor has light polarity,  $V_c$  need DC power.  $V_C$  and  $V_H$  could use same power circuit with precondition to assure performance of sensor. In order to make the sensor with better performance, suitable  $R_L$  value is needed: Power of Sensitivity body ( $P_s$ ):

$$P_s = V_c^2 \times R_s / (R_s + R_L)^2$$

Resistance of sensor( $R_s$ ):  $R_s = (V_c / V_{RL} - 1) \times R_L$

### Sensitivity Characteristics

Fig.1 shows the typical sensitivity characteristics of the MQ-6, ordinate means resistance ratio of the sensor ( $R_s/R_o$ ), abscissa is concentration of gases.  $R_s$  means resistance in different gases,  $R_o$  means resistance of sensor in 1000ppm LPG. All test are under standard test conditions.

### Influence of Temperature/Humidity

Fig.2 shows the typical temperature and humidity characteristics. Ordinate means resistance ratio of the sensor ( $R_s/R_o$ ),  $R_s$  means resistance of sensor in 1000ppm Methane under different tem. and humidity.  $R_o$  means resistance of the sensor in environment of 1000ppm Propane, 20°C/65%RH

### Structure and configuration

Structure and configuration of MQ-6 gas sensor is shown as Fig. 3, sensor composed by micro AL2O3 ceramic tube, Tin Dioxide (SnO2) sensitive layer, measuring electrode and heater are fixed into a crust made by plastic and stainless steel net. The heater provides necessary work conditions for work of sensitive components. The enveloped MQ-4 have 6 pin, 4 of them are used to fetch signals, and other 2 are used for providing heating current.

---

## **Notification**

### **1 Following conditions must be prohibited**

#### 1.1 Exposed to organic silicon steam

Organic silicon steam cause sensors invalid, sensors must be avoid exposing to silicon bond, fixture, silicon latex, putty or plastic contain silicon environment

#### 1.2 High Corrosive gas

If the sensors exposed to high concentration corrosive gas (such as  $H_2S$ ,  $SO_x$ ,  $Cl_2$ ,  $HCl$  etc), it will not only result in corrosion of sensors structure, also it cause sincere sensitivity attenuation.

#### 1.3 Alkali, Alkali metals salt, halogen pollution

The sensors performance will be changed badly if sensors be sprayed polluted by alkali metals salt especially brine, or be exposed to halogen such as fluorin.

#### 1.4 Touch water

Sensitivity of the sensors will be reduced when splattered or dipped in water.

#### 1.5 Freezing

Do avoid icing on sensor's surface, otherwise sensor would lose sensitivity.

#### 1.6 Applied voltage higher

Applied voltage on sensor should not be higher than stipulated value, otherwise it cause down-line or heater damaged, and bring on sensors' sensitivity characteristic changed badly.

#### 1.7 Voltage on wrong pins

For 6 pins sensor, if apply voltage on 1、3 pins or 4、6 pins, it will make lead broken, and without signal when apply on 2、4 pins

### **2 Following conditions must be avoided**

#### 2.1 Water Condensation

Indoor conditions, slight water condensation will effect sensors performance lightly. However, if water condensation on sensors surface and keep a certain period, sensor' sensitivity will be decreased.

#### 2.2 Used in high gas concentration

No matter the sensor is electrified or not, if long time placed in high gas concentration, if will affect sensors characteristic.

#### 2.3 Long time storage

The sensors resistance produce reversible drift if it's stored for long time without electrify, this drift is related with storage conditions. Sensors should be stored in airproof without silicon gel bag with clean air. For the sensors with long time storage but no electrify, they need long aging time for stbility before using.

#### 2.4 Long time exposed to adverse environment

No matter the sensors electrified or not, if exposed to adverse environment for long time, such as high humidity, high temperature, or high pollution etc, it will effect the sensors performance badly.

#### 2.5 Vibration

Continual vibration will result in sensors down-lead response then repture. In transportation or assembling line, pneumatic screwdriver/ultrasonic welding machine can lead this vibration.

#### 2.6 Concussion

If sensors meet strong concussion, it may lead its lead wire disconnected.

#### 2.7 Usage

For sensor, handmade welding is optimal way. If use wave crest welding should meet the following conditions:

2.7.1 Soldering flux: Rosin soldering flux contains least chlorine

2.7.2 Speed: 1-2 Meter/ Minute

2.7.3 Warm-up temperature:  $100 \pm 20^\circ C$

2.7.4 Welding temperature:  $250 \pm 10^\circ C$

2.7.5 1 time pass wave crest welding machine

If disobey the above using terms, sensors sensitivity will be reduced.
